The Future of Air Transport : NEW DISRUPTIVE AIRCRAFT CONFIGURATION by L.Lecce – Novotech Srl

April 5, 2022 - Aula “Bobbio” - Scuola Politecnica e delle Scienze di Base – P.le Tecchio - Napoli

INTRODUZIONE

Sin dall'inizio della storia dell' Aeronautica la scelta della configurazione è stata fondamentale per il successo di un velivolo: vedi le diverse scelte di Langley e I Fratelli Wright ed il successo della configurazione biblana su quella monoplana

Fliyer dei Fratelli Wright

Great Aerodrome di Samuel P. Langley

Questo finchè con l'impiego dell'ala metallica e skin collaborante , la configurazione monoplana non trionfò al successo con le realizzazioni di Fokker

Fokker D.1 - 1912

Fokker E.III - 1916

The Future of Air Transport : NEW DISRUPTIVE AIRCRAFT CONFIGURATION by L.Lecce – Novotech Srl

April 5, 2022 - Aula "Bobbio" - Scuola Politecnica e delle Scienze di Base – P.le Tecchio - Napoli

INTRODUZIONE

Cosa ha spinto a pensare e sperimentare nuove configurazioni
(in successione temporale):

- Impiego militare del mezzo aereo
- Miglioramento delle prestazioni (velocità max ; velocità di stallo; quota massima; autonomia; etc.)
- Superamento della barriera della velocità del suono
- Efficienza energetica/ Riduzione dei costi di produzione e di esercizio/
Riduzione del rumore
- Disponibilità di nuovi materiali : il composito
- Nuove applicazioni del mezzo aereo (a parte il decollo verticale , già dominio degli elicotteri) : UAM (Urban Air Mobility)

April 5, 2022 - Aula "Bobbio" - Scuola Politecnica e delle Scienze di Base – P.le Tecchio - Napoli

Cos'è l'UAM ?

Advancements achieved in the past few years in several technological fields related to the air transportation, together with the expected changes in the airworthiness regulations and ATM, make possible to develop a new class of aircraft, designed for affordability, excellent flight qualities, easy and eventually autonomous operations. **Latest studies forecast for these new vehicles an addressable market evaluated in at least \$1.5 trillion by 2040.**

Cosa cambia nel sistema di controllo del traffico aereo (ATM) con l'UAM

Designing airspace for urban air mobility: A review of concepts and approaches ; Progress in Aerospace Sciences ; Volume 125, 1 August 2021

The Future of Air Transport : NEW DISRUPTIVE AIRCRAFT CONFIGURATION by L.Lecce – Novotech Srl
 April 5, 2022 - Aula "Bobbio" - Scuola Politecnica e delle Scienze di Base – P.le Tecchio - Napoli

Cosa cambia nel sistema di controllo del traffico aereo (ATM) con l'UAM

Recommendations for further research on the topic of urban airspace include:

- Research of risk, including accident scenario planning, bird strike risk, loss of control, and risk due to wind gusts.
- Research and discussion about data usage, rights, anonymization, and de-identification of data collected by aircraft in the urban environment.
- Research on new technologies, especially ADS-B, detect-and-avoid, technology for taking over control if the geofence is breached, and a safety protocol under which new tech can be inspected.
- Research into psychoacoustic effects of drone noise on humans and airspace concept development that has noise at the core of its design.
- Research of community input and design, including visual pollution and privacy concerns.
- Research on the impact of ground infrastructure on urban planning, including landing and take-off sites, real estate, zoning, planning issues, inequalities, and air rights.

April 5, 2022 - Aula "Bobbio" - Scuola Politecnica e delle Scienze di Base – P.le Tecchio - Napoli

Cosa cambia in termini di **materiali & processi produttivi** , sistema propulsivo e certificazione

Several technologies (**composite materials**, new materials, **advanced battery technologies**, **hybrid powerplants**, aerodynamics, noise control technologies, among others) are now available, and will improve over the years to come, permitting to realize innovative air-vehicles configurations that will be capable of sustain Urban Air Mobility in metropolitan areas as well as to enable new air transportation possibilities in remote, unstructured areas and in critical conditions like emergencies and others.

Press release

Solvay partners with Novotech on its Urban Air Mobility programs

Solvay will supply composites, adhesives and technical support for UAM Italian company Novotech's Seagull and future aircraft.

Alpharetta, June 24, 2021 - 9:00 CET

Solvay is partnering with Italian UAM company **Novotech**, and will provide access to its range of thermoset, thermoplastic composites and adhesive materials as well as dedicated technical support to develop the structure of their hybrid Seagull water landing aircraft second prototype due to fly late 2021.

Automated Composites Manufacturing - CETMA, 9 June 2016

Overview on Automated Manufacturing Technologies

Cosa cambia in termini di materiali , sistema propulsivo e certificazione

EASA regulatory activities

The Agency has started creating the UAM regulatory framework, building notably on the results of 2021 UAM study on societal acceptance. Some building blocks have already been achieved:

- **On airworthiness**, EASA has been the first in the world to publish in July 2019 a Special Condition to authorise [small VTOL aircraft operations](#), in 2020 for [Light Unmanned Aircraft Systems](#) operating in medium risk situations, and in 2021 Guidelines on the [design verification of UAS operating in the specific category](#)
- **On operations and pilot licencing**, in early 2019 it has launched preparatory activities that will lead to rules for the pilots/remote pilots of these vehicles, their operators and for the infrastructure, e.g. vertiport operators
- **On airspace integration**, EASA has prepared a world's-first U-Space/UTM regulatory package (Commission Implementing regulations [2021/664](#), [2021/665](#) & [2021/666](#), adopted by the European Commission on 22 of April 2021; this package will become applicable early 2023 and will enable the safe integration of UAS operations in urban environment

The project engaged a wide variety of experts integrating industrial, institutional and research competences

Aircraft Configuration Evolution

SEAGULL

SEAGULL Main Characteristics

- All composite fuselage ,tail, sponsons and controls
- Metallic braced wing (through linear actuators)
- Automated Folding wing system allowing the usage:
 - as classical UL seaplane
 - as sailboat (we hope !!)
 - as boat or for ground transport and storage (fully folded aft)
- Pushing propeller configuration
- Hybrid propulsion system (optional), can be only CI or All Electric
- Retractable landing gear (optional), we will adopt in the second prototype (31/12/2021)
